

SOUTH COAST AIR QUALITY MANAGEMENT DISTRICT SMOKE ADVISORY

Valid Thursday August 26, 2021 through Friday August 27, 2021

This advisory is in effect through Friday afternoon. South Coast AQMD will issue an update if additional information becomes available.

A wildfire named South Fire is burning in the Lytle Creek area north of Fontana. As of 3:00 PM on Thursday, the burn area was reported at 700 acres with 0% containment. Current information on the South Fire can be found on CAL FIRE at <https://www.fire.ca.gov/incidents/2021/8/25/south-fire/>.

Past and Current Smoke and Ash Impacts

The South Fire is actively producing smoke on Thursday afternoon based on satellite and webcam imagery. Winds are transporting the smoke plume towards the northeast and into the Cajon Pass and high desert areas out of the South Coast AQMD's jurisdiction. Since Wednesday night, South Coast AQMD's regulatory PM2.5 monitors in Upland and Crestline and low-cost PM2.5 sensors in Rancho Cucamonga, Fontana, San Bernardino, and Crestline recorded **Good** to **Moderate** Air Quality Index (AQI) levels.

Visit <https://www.aqmd.gov/aqdata> to view current air quality conditions.

In any area impacted by smoke: If you smell smoke or see ash due to a wildfire, limit your exposure by remaining indoors with windows and doors closed or seeking alternate shelter, and avoiding vigorous physical activity. For more tips on protecting yourself during a wildfire, see South Coast AQMD's Wildfire Smoke & Ash Health & Safety Tips page: <http://www.aqmd.gov/wildfire-health-info-smoke-tips>

Forecasted Smoke and Ash Impacts

Areas downwind of the South Fire will experience the highest AQI levels due to smoke impacts. Smoke and ash impacts will be highly variable in both timing and location through Friday.

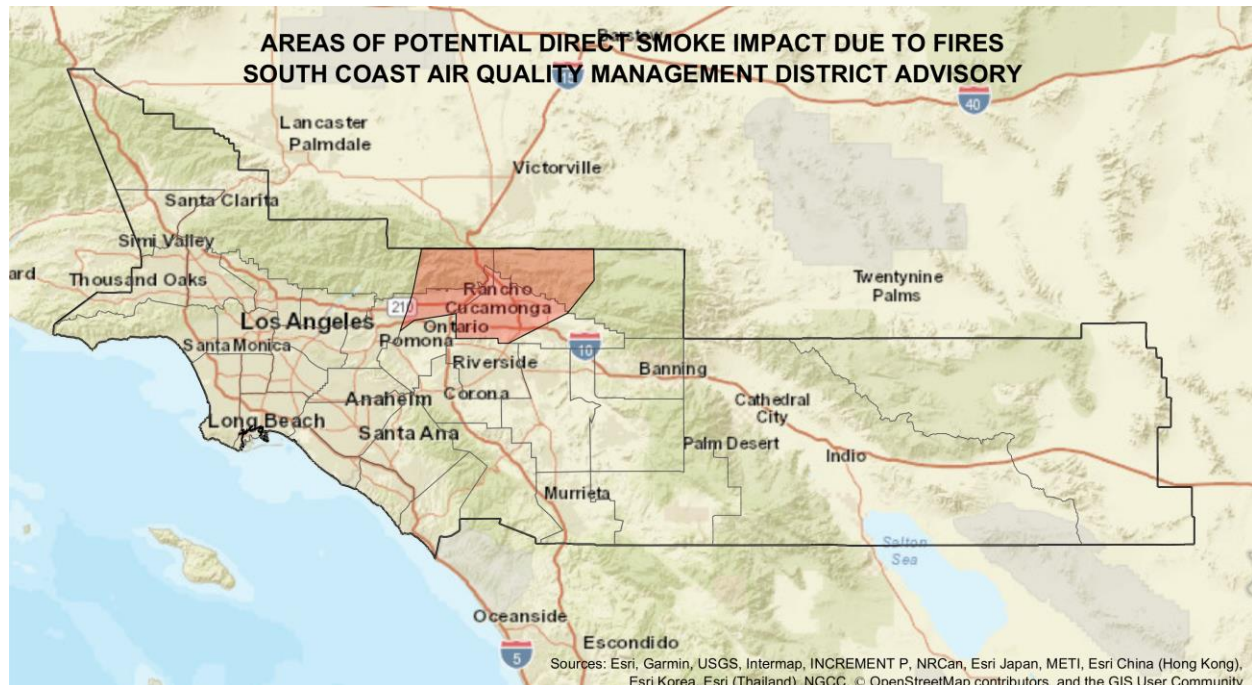

- **Thursday afternoon:** Winds from the southwest will push smoke towards the northeast into the Cajon Pass and high desert areas out of the South Coast AQMD's jurisdiction.
- **Thursday evening through Friday morning:** Winds from the northwest and north will carry the smoke to the southeast and south. PM2.5 concentration may be elevated in areas near Rancho Cucamonga and Fontana. Areas in direct proximity to the South Fire will likely see the highest particulate matter levels overnight as smoke is likely to remain closer to the ground.
- **Friday afternoon:** If the fire continues to produce smoke, the southwest wind near the South Fire will push smoke towards the northeast and into the Cajon Pass and high desert areas out of the South Coast AQMD's jurisdiction.

Overall, meteorological conditions will bring smoke and ash into portions of San Bernardino County with more significant impacts near the South Fire. **Unhealthy for Sensitive Groups** or higher AQI levels due to PM2.5 concentrations are possible in areas of direct smoke impacts. Afternoon ozone levels, the

predominant summertime pollutant, will also be elevated throughout the Inland Empire and the San Bernardino Mountains with **Unhealthy** AQI levels possible.

Areas of direct impacts and poor air quality may include portions of:

- **San Bernardino County:** Northwest San Bernardino Valley (Area 32), Central San Bernardino Valley (Area 34), West San Bernardino Mountains (Area 36), Central San Bernardino Mountains (Area 37)
